

PLOS BIOLOGY

making an impact

JOURNALISTS' CHOICE

70%

Since its launch in October 2003, PLoS Biology has revolutionized scientific publishing by defining the true meaning of open access.

Every month, quality peer-reviewed research and in-depth articles are instantly and freely available online to copy, distribute and use without limits. We simply ask that you credit the author and original source.

The research in PLoS Biology has been so significant that it has been featured regularly in the world's most popular media.

Over 70% of our first twelve issues featured research articles that inspired prominent coverage in the New York Times.

Our articles have also been the driving force behind science stories on over 70 television and radio stations, including ABC, CBS, NBC, Fox, CNN, BBC and many others.

The extraordinary impact of PLoS Biology would not have been possible without the amazing support of our editorial board, authors and readers. Thank you.
